PROFILE

Backend-focused Software Engineer with 4+ years of professional experience in Java 17, Spring Boot and Angular. Designed and own an end-to-end e-invoicing solution (XRechnung, ZUGFeRD; EN 16931) built on a format-independent mapping and validation pipeline. Strongest at turning complex business rules into clean, reusable designs and at performance tuning.

EXPERIENCE

Software Engineer

LIRA Service GmbH · Paderborn, Germany

Oct 2022 – Present

Full-time since Apr 2025

E-invoicing (EN 16931)

- Designed and own the ERP's e-invoicing feature end to end (model → map → generate → send): a two-stage pipeline from a canonical in-house XML template to the target formats XRechnung (UBL and CII) and ZUGFeRD, validated against the official rules (KoSIT validator, Schematron). Go-live Q4 2026.
- Built it as a reusable library with separate interface and contract modules, so new formats plug in without touching the core; the same architecture is now being extended to Slovak e-invoicing.
- Solved summary invoicing across multiple partial invoices that span VAT rate changes (e.g. the 2020 temporary VAT reduction), keeping tax amounts correct per period.

ERP platform & integrations

- Built the automated invoice transfer from the ERP to the Varial accounting system, including token-based authentication and transactional handling of each export.
- Cut list-view load times by ~70% on datasets with millions of records by introducing lightweight DTOs and reworking SQL queries and data structures.
- Implemented multi-company data isolation with AOP-based Hibernate filtering; introduced optimistic locking and soft deletes to protect data integrity under concurrent use.
- Built iText-based PDF templating for business documents (invoices, offers, orders, dispatch papers, reports).
- Contributed to a new stock-management product (Spring Boot, Eclipse SWT): depreciation logic and its automation, plus JasperReports reports (goods receipt/issue, stock development over time).
- Maintain >90% line coverage (JUnit, Mockito) and review teammates' code for correctness, performance and design. Promoted from working student (20 h/week, Oct 2022 – Mar 2025) to full-time.

Software Developer (Angular / Node.js)

Macrosoft Creations · Gandhinagar, India

Oct 2020 – Mar 2021

- Built Angular components, routing and services against REST APIs; extended Node.js endpoints to match.

Software Engineer – PLM Integration

SteepGraph Systems · Pune, India

Mar 2019 – Aug 2020

- Built REST APIs and integration logic for PLM platforms (Dassault 3DEXPERIENCE, Aras) in Java and JavaScript for enterprise clients. Promoted from trainee within 3 months.

SKILLS

Backend	Java (8/11/17), Spring Boot, Spring MVC, Hibernate/JPA, REST APIs, AOP, Node.js
E-invoicing	EN 16931, XRechnung (UBL, CII), ZUGFeRD, XML mapping, KoSIT validator, Schematron, Varial integration
Frontend	Angular, TypeScript, JavaScript, Eclipse SWT
Data & reporting	PostgreSQL, MySQL, Oracle, SQL performance tuning, JasperReports, iText
Quality & tooling	JUnit, Mockito, SonarQube, Docker, GitLab CI/CD, Git, Linux, JIRA, AI-assisted development (Claude)
Languages	English (professional), German (A1, learning toward B1), Hindi and Gujarati (native)

EDUCATION

M.Sc. Computer Science – Paderborn University

Dec 2021 – Present

- Thesis completed; 114 of 120 ECTS; final module in winter 2026/27, degree expected spring 2027. Part-time alongside work.
- Thesis: Jimple-to-JVM bytecode transformer built on the SootUp static-analysis framework and ASM.
- DevOps lead in a 14-person project group: led a 4-person sub-team building GitLab CI/CD pipelines with SonarQube quality gates.

B.E. Computer Engineering – Marwadi University, India

2014 – 2018
